Scotch®
Super 33+ Vinyl Electrical Tape
Data Sheet

Product Description
Scotch Super 33+ Electrical Tape is a premium grade, 0.178mm thick, all-weather vinyl insulating tape. It is designed to perform continuously in a temperature ambient of up to 105°C (220°F). The tape is conformable for cold weather application down to –18° (0°F). It has excellent resistance to abrasion, moisture, alkalies, acids, corrosion and varying weather conditions (including ultraviolet exposure). The combination of elastic backing and aggressive adhesive provides moisture-tight electrical and mechanical protection with minimum bulk. Super 33+ is an Underwriters’ Laboratories Listed and Canadian Standards Association Certified “Insulating Tape”.

- UL Listed; UL 510 Standard “Insulating Tape” (product category OANZ), File E129200.
- CSA Certification; Standard C22.2 No. 197-M1983 “PVC Insulating Tape” File LR 48769.
- VDE 0340 – Type K10.
- Polyvinyl chloride (PVC) backing.
- Pressure-sensitive rubber based adhesive.
- Compatible with solid dielectric cable insulations.
- Compatible with rubber and synthetic splicing compounds, as well as epoxy and polyurethane resins.
- Inhibits corrosion of electrical conductors.
- For indoor or outdoor applications.

Applications

- Primary electrical insulation for all wire and cable splices rated up to 600V and 105°C (220°F).
- Primary electrical insulation for 600V bus applications and protective jacketing for low and high voltage bus.
- Protective jacketing for high voltage cable splices and repairs.
- Harnessing of wire and cables.

Specifications

The tape is based on polyvinyl chloride (PVC) and/or its copolymers and has a rubber-based, pressure-sensitive adhesive. The tape shall be 0.178mm thick, and be UL Listed and marked per UL Standard 510 as “Flame Bed...
Scotch®
Super 33+ Vinyl Electrical Tape
Data Sheet

Retardant Cold and Weather Resistant”. The tape must be applicable at temperatures ranging from –18°C through 38°C (0°F though 100°F) without loss of physical properties. The tape shall be classified for use in both indoor and outdoor environments. The tape shall be compatible with synthetic cable insulations, jackets and splicing compounds.

The tape will remain stable and will not telescope more than 2.5mm when maintained at temperatures below 50°C (120°F).

Engineering/Architectural Specification

Primary electrical insulation (branch wiring in wet or dry locations). All splices for 600 volt wire rated 105°C (220°F) and below shall be insulated with a minimum of two half-lapped layers of Scotch Super 33+ Vinyl Electrical Tape. All connectors having irregular surfaces shall be padded with Scotchfil™ Electrical Insulation Putty or Scotch 130C Rubber Splicing Tape prior to insulating with Scotch Super 33+ Tape.

Mechanical protection (outer jacketing). All rubber and thermoplastic insulating high voltage power cable tape splices and repairs shall be over wrapped with at least two half-lapped layers of Scotch Super 33+ Vinyl Electrical Tape.

Installation Techniques

The tape shall be applied in half-lapped layers with sufficient tension to produce a uniform wind (for most applications this tension will reduce the tape’s width to approximately 5/8 of its original width). On pigtail splices, the tape shall be wrapped beyond the end of the wires and then folded back, leaving a protective cushion to resist cut-through. Wrap tape up-hill, taping from a smaller diameter surface to a larger diameter surface. Apply the tape with no tension on the last wrap to prevent flagging.

Maintenance

Scotch Super 33+ Tape complies with the requirements of UL 510 for storage. When maintained under normal storage conditions, the tape will remain stable and has a five-year shelf-life.

Availability

Scotch Super 33+ Vinyl Electrical Tape is available from your local 3M authorised distributor in the standard roll size 19mm x 20m. Other lengths and widths may be available by special request.
