FILOform

connect ▸ seal ▸ protect ▸

At Filoform, we focus on you - our customers. From the moment you contact us, you are assured of a friendly reception and a prompt response to your queries. We promise you our undivided attention and we will carry out your instructions to the letter.

Our dedicated, close knit and professional team will engage with you, to find out exaFiloformy what you want in order to supply you with the best solutions you need, in your specialized market sector. We also aim to continuously improve on our service to you, however we can, wherever we can.

We will act with openness, honesty and complete transparency in all of our dealings with you - in sales, production, research, administration and management.

Simply put, we want you to enjoy the best experience possible as a customer of Filoform.

Our Mission

As energy, communications and continuous innovation are all inextricably linked with our lives today, modern communication and utility networks will play a vital and increasingly important role in the creation of our future society.

Filoform's mission is to assist you in planning for this opportunity now and to provide you with the best solutions, applications and products to protect your investment in the future.

This future includes:

· The development of highly efficient and smart energy grids with which the end user has a relationship both as a buyer and seller of energy.
· The creation of decentralized energy production systems to meet local demand for electric mobility.
· The utilization of new, safer and sustainable energy sources like wind and solar power.
· Changing the way in which we work by planning and developing high data capacity fibre optic networks and different types of mobile communications networks.

Our Expertise

For over 50 years, we have developed major expertise in manufacturing and supplying quality products and solutions to connect, seal and protect the underground cable networks of our international and domestic customers.

ISO certification

The quality of our products is monitored - from raw material to the finished article. Our ISO 9001: 2008 certificate assures you that we work in accordance with specified procedures - from the development process and right through production. Because we review all of our processes on a constant basis, any deficiencies are noticed immediately. This ensures a continuous process of improvement.

This also applies to our environmental management system. Certified to ISO 14001: 2004, Filoform is committed to continuously improving on the environmental impact of our products and operations.

Quality, Environment, Health, and Safety Policy

Filoform works in a safe, responsible way, through which we respect quality, the environment and health of our employees, our clients and the community where we are active. We shall in no way act in a reckless way concerning values on quality, environment, health and safety in order to increase our profits or production.

Our products and working methods will be designed to respect all current laws and government directions. Our processes are as efficient as possible and we strife to continuously improve or products, services and customer satisfaction. Our education policy will enable employees to perform their tasks in the best possible way.

Filoform Values concerning Quality, Environment, Health and Safety:

• We value the human life above all and we deal accordingly with risks. We see this as a responsibility for all employees.
• We continuously strive to a work environment free of environmental, health and safety incidents. We see this as a responsibility for all employees.
• We make no concessions in our quality, environment, health and safety for profits or production. Where possible we will change to more environmental friendly solutions and products.
• We obey all laws and apply stricter rules to us and our vendors where we experience unacceptable risks.
• We support the durable development by considering social responsibility, economic success and high environmental quality in our decision making process.
• We measure and evaluate our impact on the environment and strive for continuously improvement.
• We deliver and use safe and reliable products and services.
• We use our knowledge on quality, environment, health and safety to improve the safety and well being in the community where we are active.
• We all have the obligation to respect and implement these principles and values. Each and every Filoform employee is expected to understand and promote this policy and the related principles and actively contribute to their implementation.

Technical Information

Injection Moulded Shells
Rigid and very strong, their snap-lock design forms an excellent seal and prevents egress of resin.

Mechanical Connectors
Filoform mechanical connectors have been especially designed to complete a cable joint kit suitable as standard to fit LV cables up to 120mm. The connectors are machined from solid brass and are suitable for either copper or aluminum conductors.

The connector range is complemented with larger aluminum sheer off bolt heads, please see the LV connector section.

Earth Braid
Filoform's earth braid offers significant advantages over "single wire type" earth continuity systems, which can fail if poorly positioned within wire armour cores that have "spread". The flat, soft braid ensures good electrical contact and is insulated for extra protection.

Constant Force Springs
Cable Joints move and expand due to earth shift and heat from electrical current. Constant force springs react to this movement and maintain a sound electrical connection between the steel wire armoring and the earth continuity braid.

This method replaces the original work drive clip.

Core Separators
Provide safe separation of cores and connectors.

Two-part resin
Filoform's long proven resin formula is of such high quality that's it is equally suitable for both LV and MV applications and provides excellent adhesion to PVC, XLPE, Polythene, and paper cables. It is supplied in a two-part easy mix packaging, ensuring both convenience and safety.

Packaging
Filoform Joints are supplied in robust and rigid boxes to withstand stacking both in warehouses and in pallets. These boxes are also popular with jointers since they can be used as "mini workbenches" to cut the ends of the shells.

Breadth of range
There are few, if any combinations of power cables that Filoform cannot join. We offer over 600 variations of resin cable joints including special versions for mines & quarries; oil & petrochem, Telecom, Control; & cathodic protection. These utilize both cast resin joints; Taped resin joints and heatshrink technology. All supplied for both LV & MV applications.

Technical Support
For technical support please call you dedicated office. You will find contact details in the back of the catalogue.

LV Resin Cable Joints - Special Applications

suitable for PVC or XLPE cable, 1kV

Cathodic Protection Joints

Approved by many oil and utility companies throughout the world, the main applications for these joints include:
Jointing of single core DC feeder to anode cable for cathodic protection of pipelines, jetties, tanks and buried structures.

Two variants of CP joints are offered:
CPJ · The classic cathodic protection joint for use when upright branch joints are required.
CB0 · A "Y"-shaped joint for horizontal branch jointing applications.

LV Resin Cable Joints - Low Smoke Zero Halogen

suitable for PVC or XLPE cable, 1kV

Distinguished by its yellow- tinted injection-moulded shells, Filoform's range of Low Smoke Zero Halogen cable joints has been especially developed to meet the increasing demand for joints that match the characteristics of modern flame retardant, fire resistant and low smoke cables.

To reflect the specialist application, these joints can be installed without the need for dedicated tools or the application of heat.

All of the popular and well- established features of standard Filoform joints have been retained. Internationally, there are several standards that regulate fire behaviour. Filoform products conform to the following national standards:

UK: - BS 476 Part 7, Class 1Y rating.
Germany: - DIN 4102/part 1, B1 rating.
France: - NFP 92 501, 5 & 16, M2 rating.

A typical kit consists of an outer shell manufactured from UV stable , low smoke, zero halogen, flame retardant material that matches or exceeds the relevant properties of similarly specified cable.

For the majority of applications it is only the shell that requires specialist fire-sensitive properties. In these cases Filoform's standard two-part poly-urethane resin is supplied in easy-mix pouches.

When specifications call for the resin to also be flame retardant, halo-gen-free and low smoke, joints are shipped with Filoform's CR171H resin which is flame retardent to V0 rating of UL94.

LV Resin Cable Joints - Low Smoke Zero Halogen

suitable for PVC or XLPE cable, 1kV

Filoform Cold-Pour Two-Part Resins

Features
· Two-part Polyurethane resin in protective aluminium foil.
· Mixing is performed in sealed conditions - no need for skin contact but safety gloves are provided.
· Controlled curing temperature designed to be compatible with PVC, XLPE, EPR, Polythene and PILC cables.
· Clear mixing instructions on every pack.
· Full Health & Safety labelling.
· Batch number & use-by-date on every pack.
· Designed to meet the requirements of BS 6910, BS7888, CENELEC HD623 S1 and EN50393:2006.
· The same well-proven high quality resin formula is used as standard throughout both the LV & MV ranges.

Also available
· Flame retardant, halogen-free resin to VO rating of UL94.
· Traffic systems resin - Two-part, fast-curing toughened polyurethane resin designed for the encapsulation of speed sensors, junction boxes and the bases of control cabinets.
· Re-enterable resin - Two-part polyurethane resin that can be removed after curing. Ideal for encapsulating expensive components or multicore and multipair cables where subsequent repair may be required.

LV Resin Cable Joints - Branch

suitable for PVC or XLPE cable, 1kV

Smart Gel Joint

The Smart-Joint is a cable joint which is pre-filled with an insulating and waterproof filling mass, and is suitable for cable diameters up to 15.7mm (0,62 inch); 4 x 2.5 mm^2 (Un-armoured cables Only).

· Quick and easy installation
· Ready to use; the Smart Joint is being
  supplied "pre-filled" with the insulating filling mass (double) branch off joint
  provided with 4 pre-installed connectors and one earth connector
· Fully sealed for water penetration Environmental friendly
· No shelf life
· Provided with cable clamps
· Provided with 2 holes for easy installation CE-approval

Part No.	Description	Cable Diameter	Dimensions
80172	Smart Joint	5 – 15.7mm Ø	190 x 45 x 35mm
80176	Branch Smart Joint	5 – 15.7mm Ø x 4	170 x 73 x 37mm

Gelbox

· Suitable for connecting LV electrical cables, telephone cables, etc.
· Gelbox is especially suitable for outdoor- and underground applications or in a humid environment where and IP68 sealing is required.

Item number	Description	Cable diameter (mm)	Dimensions (mm)	Order unit	Qty
80160	Gelbox	max Ø 14	78x78x34	per piece	170 x 73 x 37mm

Filobox

Filobox is a compact and reliable cable joint for connecting plastic insulated cables. The Filobox is ideally suited for applications underwater, underground or in wet areas where an IP68 sealing is required.

Item number	Description	Cable diameter (mm)	Dimensions (mm)	Order unit
801601	Filobox JB2.5	max Ø 20	78x78x34	5 pcs/carton
801602	Filobox JB 6	max Ø 20	94x94x34	5 pcs/carton

LV Taped Resin Injection Joint

Filoform has over 50 years' experience in production and supply of taped injection joints and components.
The latest techniques and most innovative products are created from field tests and tests in our own R&D laboratory. Filoform injection joints are compatible with most commonly used cable types, such as XLPE, PVC, PE, and PILC cables.

Taped injection cable joints are well known for their flexibility, as this system can accommodate most cable types and configurations. With only six basic components all Low Voltage cable joints can be made. This offers enormous advantages in the direction of logistics and training of your personnel.

The manufacturing process of Filoform injection joint components is continuously monitored for quality control and meets the international engineering standards in conformity with the ISO 9001-2000 quality standard.
Once correctly installed, Filoform's injection joints provides a mechanically strong and flexible seal whilst also providing excellent resistance to weathering, moisture, contamination and adverse environmental conditions.
Filoform supplies excellent polyurethane resins as well as epoxy resins for taped injection joints. All resins are developed in accordance with HD631-1 S2 standard. The complete resin injection joints are tested in accordance with EN50393. All major utilities in the Netherlands are installing the Filoform injection joints into their networks for many years now.

Advantages of Filoform injection joints:

Technical
· Six basic components allows the engineer to make every type of straight connection joint, branch-off joint, stop end joint, transition joint and cable repair joint.
· Suitable for cable sheath repair, no separate heat shrink repair sleeves required.
· Suitable for complicated connections, for example:
· Crossed cores
· Cables on a bend or radius
· Cable running horizontally
· Suitable for both unarmoured and armoured cables and cables with incorporated earth screen.
· Less faults compared to the traditional cast resin joints.
· Jointing instructions remains the same, regardless of the connector types being used.

Economical
· Cost saving and logistical advantages
· 50% lower stock value.
· Saves space in service vans and warehouses
· Always the right materials available for every type of joint.
· A completed joint, uses much less resin compared to cast resin joints, creating a smaller more compact cable joint.

Environmental
· Uses less resin compared to traditional cast resin joints
· Fully cured resins can be disposed as normal waste material
· RoHs and Reach compliant

Health & Safety
· Closed system for both mixing and injecting the resin ensures minimal contact with the resin.
· High strength resin packs making it fit for use in pressure pumps.
· All resins have excellent insulation resistance in both the liquid and solid phase;
· This value is also monitored & checked during each production batch.

LV Filoslim cable jointing system
Filoform has over 50 years' experience in production and supply of taped resin injection joints and components.

The latest techniques and most innovative products are created from field tests and tests in our own R&D laboratory. Filoform injection joints are compatible with most commonly used cable types, such as XLPE, PVC, PE, and PILC cables.

Filoform now offers the benefits of the traditional taped resin injection cable joint combined into one joint which can be filled by Manuel pressure FiloSlim ensures you can make high quality low voltage joints, filled by hand, without special or expensive tools and much less labour than traditional injection joints. With the new FiloSlim cable jointing system you can create a perfect cable joint with just five basic components.

Once correctly installed, Filoform's injection joints provides a mechanically strong and flexible seal whilst also providing excellent resistance to weathering, moisture, contamination and adverse environmental conditions.

Filoform supplies an excellent polyurethane resin with FiloSlim LV cable joints. This resin is developed in accordance with HD631-1 S2 standard. The complete FiloSlim LV cable joints is tested in accordance with EN50393.

Advantages FiloSlim wrap-around cable joint:
· No special tools are required. Filling by hand pressure
· Much less labor is required for wrapping the 3D gauze plus less time for mixing resin packs compared to a traditional taped resin injection cable joint
· FiloSlim cable joints can be adapted to any situation, including repairs to damaged cable sheaths straight connection, branch and end joints are made with a few basic components
· Cost and logistic advantages: low inventory costs, space saved in warehouse and vans
· Backwards compatible with traditional taped resin injection cable joint.
· Moisture resistance even when installed on wet cables
· Suitable for complicated cable connections, for example:
· Crossed cores
· Cables on a bend or radius
· Cable running horizontally

Environmentally friendly:
· Compact dimensions ensure minimum use of resin and materials
· Fully closed system for both mixing and injecting the resin ensures minimal contact with resin
· FiloSlim wrap around joints are approved under EN 50393

To create a FiloSlim wrap-around joint, 5 basic materials are required. For further technical information about the individual components, please continue reading on the following pages.

LV Heatshrink Joint

A comprehensive range of heatshrink joints offering the following features:-
· Simple, fast installation allowing immediate backfill of the trench.
· Excellent electrical insulation
· Outstanding environmental resistance.
· Proven mechanical strength.
· Slim profile.
· Mechanical or crimp connectors available upon request.
· Joints to customer specification also available (eg HJ1/3/6 for 3 x 6 mm2, HJ3/3/120 for 3 x 120 mm2 etc).
· Special kits for lead covered (LC) cables.

Typical kit content
Adhesive-lined medium wall tubing for connector insulation, outer sealing and protection tube. For armoured cable we include a special aluminium cage and constant force springs for mechanical protection and earth continuity.

Accessories

Constant Force Springs

Filoform's range of Constant Force Springs is manufactured from BS5770 302S25 Stainless Steel which has been heat-treated and coiled. The springs feature chamfered and raised leading edges for easy use.

Principal applications are:
· Earth continuity systems for LV joints.
· Screen attachment in MV joints and terminations.

Copper wire mesh

Copper wire mesh is used for shielding and earthing in telecommunication joints and others. The wire mesh needs to be applied with a slight tensile force, without pleats, and with half overlap. Both ends of the wire mesh need to be fixed with a constant force spring or by soldering.

tem number	Description	Order unit
80155	Copper wire mesh 25mmx4,5m (Sleeve Double wire knitted)	per piece
80156	Copper wire mesh 60mmx4m (Flat Single wire knitted)	per piece

Steel wire mesh

Filoform steel wire mesh is a knitted wire mesh of tin-plated steel wire and is used for EMC-shielding and continuation of the earth connection in joints for signalisation cables.

Item number	Description	Order unit
80157	Steel wire mesh 50mmx25m	per meter

Filofast thermoshrink joints

The Filofast joints have been developed for telecom networks, based on a special sealing material, and offer many advantages against other jointing methods existing in the market. Installation is easy, and the result is extremely reliable. Filofast joints can be used for connection- as well as for branch-off joints.

tem number	Description	Order unit

MV Terminations for Polymeric Cables up to 36kV

7.2 kV to 36kV Terminations certified to:
DIN VDE 0278 up to 24 kV
IEC 502 1994 for 36 kV.

· Terminations and tail lengths can be designed for individual needs.
· Optional crimping lugs for both indoor and outdoor terminations are available
· A range of bushing kits for indoor terminations is also available.
· Stand-off insulators with pole mounting brackets for outdoor terminations are also
  available.

For Single Core Polymeric Cable					
Each kit contains one set of three single-core terminations

MV (15kV) Heatshrink & Resin Cable Joints

Heatshrink joint, resin protected to prevent water ingress

An innovative, highly effective and fully-tested design of joint that combines Filoform's two core competencies in resin and heatshrink joint technologies. Features include:
· Resin encapsulation provides mechanical protection and prevents water ingress.
· Simple design – easy to install.
· Suitable cable types include:
  - XLPE.
  - Paper.
  - XLPE/Paper transition.
  - Trifurcating joints 3-core to 3 single cores.
· Optional core connectors - choice of:
  - Mechanical connectors with shear-head bolts.
  - Compression ferrules with conical ends.
  - High quality two-part polyurethane resin in easy-mix bag system.
· Unique mould design.
  - Clear shell for easy inspection.
  - Interlocking, non-reversible halves.
  - Superior resin-seal system.

· No taping of core conductors.
· Earth continuity kit with constant force spring system.
· Strong aluminium wrap-around cage - rubber spacers ensure correct positioning .
· All components and resin packed together in one sturdy box.
· Tested to:
  - CENELEC HD 629.1S1:1996.
  - DIN VDE 0278 Pt 629-1.
· Short circuit and current test (armour continuity & complete joint):
  - 18.5 kA for 1 second.
  - 22kA for 0.5 second.

A range of Pilot cable joints is available to accompany this range – see page 6

CM6HP3N	Paper/Paper	3 core 35 - 150 mm^2
CM7HP3N	Paper/Paper	3 core 185 - 300 mm^2
To ensure correct selection of the joints, full cable specifications should be provided at time of order.		

MV Heatshrink Cable Joints

7.2 - 36 kV

Filoform's C-Shrink Medium Voltage Heatshrink Jointing System for single and three core cables up to 36 kV features:
· Simple design – easy to install.
· Suitable cable types include:
  - XLPE, Paper & XLPE/Paper transition.
· Optional core connectors (see below).
· Outer protection either:
  - Thick wall heatshrink tubing.
  - or Reinforced wrap-around sealing sleeve for maximum mechanical strength and minimum installation space.
· 3.3kV non-shielded Joints also available.
· Tested to CENELEC HD629.1S1:1996 (DIN VDE 0278 Pt 629-1).

MV Connectors

To complement its range of MV joints, Filoform can supply either shear-head mechanical connectors or compression ferrules. All are available with barrier for use with transition XLPE/paper cable joints.

MV Tubing

Stress Control Tubing

Heat-shrinkable tubing used exclusively as stress control relief in medium voltage cable joints and terminations, up to 36kV. The product features a very high dielectric constant.

Basic Properties	
Operating Temperature	-40º to +100ºC
Shrinking Temperature	110ºC
Dielectric constant (permitivity)	20 - 35
Standard Colour	Black

Part No	Inner Ø as supplied (mm)	Inner Ø recovered (mm)	Wall thickness nominal (mm)
HSC26-12	26	12	2.5
HSC30-15	30	15	2.7
HSC45-20	45	20	2.8
HSC50-25	50	25	2.9
HSC65-30	65	30	3.1
HSC95-45	95	45	3.2

Anti-tracking Tubing

Anti-tracking red heat-shrinkable tubing for use in MV joints and terminations up to 36kV.

Basic Properties	
Operating Temperature	-40º to +100ºC
Shrinking Temperature	120ºC
Dielectric strength	> 15 kV/mm
Comparative tracking index	KA1 (IEC 112)
Flammability	Self extinguishing/ halogen free
Standard Colour	Black

Part No	Inner Ø as supplied (mm)	Inner Ø recovered (mm)	Wall thickness nominal (mm)
HAT30-10	30	10	2.4
HAT35-12	35	12	2.6
HAT49-16	49	16	2.9
HAT56-21	56	21	3.0
HAT70-26	70	26	3.1
HAT100-40	100	40	3.8

Semi-conductive Tubing

Semi-conductive heat-shrinkable tubing used to rebuild the shield in medium voltage cable joint applications.

Basic Properties	
Operating Temperature	-40º to +90ºC
Shrinking Temperature	120ºC
Standard Colour	Black

Part No	Inner Ø as supplied (mm)	Inner Ø recovered (mm)	Wall thickness nominal (mm)
HCON44-16	44	16	2.8
HCON70-25	70	25	3.0
HCON95-35	95	35	3.0
HCON110-40	110	40	3.0

Busbar Tubing

The HBM range of heat shrinkable tubing is particularly suited for insulating medium voltage busbars up to 36kV. It is available in Medium Wall (reduces distance between bus bars to half) and Thick Wall (reduces distance to one third the distance between two phases in medium voltage switchboards).

Basic Properties	
Continuous temperature range	-40º to +100ºC
Shrinking Temperature	120ºC
Dielectric strength	> 15 kV/mm

Part No	Inner Ø as supplied (mm)	Inner Ø recovered (mm)	Wall thickness nominal (mm)
Medium Wall			
HBM30-12	30	12	2.3
HBM50-12	50	20	2.5
HBM75-30	75	30	2.5
HBM100-40	100	40	2.5
HBM120-50	120	50	3.0
Thick Wall			
HBT36-10	36	10	4.0
HBT46-14	46	14	4.5
HBT54-16	54	16	5.0
HBT66-20	66	20	5.0
HBT95-30	95	30	7.0

MV Breakouts

Heat-shrinkable tubing used exclusively as stress control relief in medium voltage cable joints and terminations, up to 36kV. The product features a very high dielectric constant.

MV Terminations for Polymeric Cables up to 36kV

These Universal Boot Kits are designed for indoor use with Polymeric or Paper cables at voltages between 6.6kV and 24kV. Providing screw-on connection using standard bushing, they are equally suitable for round or sector-shaped cable.

Features include:
· Manufactured from heavy-duty EPDM rubber.
· Re-usable.
· Suitable for use in oil-filled transformer boxes when Paper cables are upgraded to XLPE.
· Universal design - same kit can be used for straight, right-angled, or parallel ("piggy-back") installation.
· Easy to install - no heat or tools required. Easily removable cover for voltage testing.
· An ideal complement to indoor terminations.
· Sold in sets of 3.

Illustration of a parallel installation. (extension bolts can be provided.)

Illustration of universal straight or right-angle installation.

Cable size (mm2)	Part No	Rating (A)
25 - 300	IBK300	600

| Recommended Minimum Air Gaps (mm)						
U (kV)	Insulation Level (kV)	A	B	C	D	E
12	75	50	10	90	20	470
24	125	110	50	130	50	570
The recommended minimum distances quoted apply in general. However, in cases where type testing has been carried out, other minimum distances may apply. The distances shown above are for gas-insulated Ring Main Units (RMU).						
MV Accessories

Heatshrink Boot Kits

Each kit consists of three boots and sufficient mastic tape to cover the bushing nuts.

Cable size (mm²)	Part No	Description
50 - 400	HKS	Set of 3 straight boots
	HKR	Set of 3 right-angle boots

Stand-Off Insulators

Designed for outdoor terminations, each kit consists of a pole mounting bracket with three polymeric insulators.
Voltage kV	Creepage Path (mm)	Part No
12	465	SO12
24	615	SO24
33	845	SO33
36	1160	SO36

Gland Kits

"Top Hat" style, for three-core paper or polymeric cable. Manufactured from zinc-plated steel. Suitable for Indoor Terminations up to 36kV.

Cable size (mm²)	Part No
16 - 95	HSGA/3
120 - 300	HSGB/3

"Top Hat" style, for single-core aluminium wire armoured cable. Manufactured from aluminium. Suitable for Indoor Terminations up to 36kV.

Cable size (mm2)	Part No
16 - 630	HSGB/1
Supplied in sets of three	

Brass cone style, for paper or polymeric cable. Suitable for earthing of cable entry for Indoor Terminations up to 36kV.

Cable size (mm2)	Part No	Description
16 - 300	CG16-300	Kit for 3 x single-core cable
16 - 300	CG16-300/INS	Kit for 1 x 3 core cable c/w insulating cork gasket

Cable Joints Accessoires

An especially comprehensive range of lugs and ferrules that is manufactured to the very highest standards. Matching mechanical, battery and hydraulic compression tools complement the range. Range highlights are shown below and a detailed 300 page catalogue is available upon request.

"R" range
Tin plated copper cable lugs, available with or without inspection holes in size range 6 mm2 to 400 mm2. Insulated, 45° and 90° angled variants also available.Ferrules include "Butt", "T" and "Cross" connector types.

DIN range
As above, with the added benefit of meeting DIN Standard 46235.

Aluminium cable lugs and ferrules
Aluminium lugs 16 mm2 to 500 mm2 with solid palm (suitable for outdoor terminations). DIN Standard 46329.
Aluminium lugs 10 mm2 to 400 mm2 suitable for indoor terminations. DIN Standard 48201.
Aluminium ferrules 10mm2 to 500 mm2. DIN Standard 48201.

Bi-metallic cable lugs and ferrules
Bi-metallic lugs 16 mm2 to 300 mm2 with solid copper palm. DIN Standard 48201.
Bi-metallic lugs10 mm2 to 400 mm2 with copper insert. DIN Standard 48201.
Bi-metallic ferrules 10mm2 to 300 mm2 including copper connecting bolt option.

Insulated and uninsulated solderless terminals and cable end sleeves
Ring, fork, tab and pin types with matching receptacles and butt connectors. Available both in packs and assortment boxes.

Duct sealing

Wherever a structure or facility needs connecting to necessary utilities, the fabric of the structure is breached by these connections. Often, these utilities enter via a duct system containing one or more cable or pipes.

Each duct entry to a structure is therefore a very easy way for contamination, infestations, floods and fire to enter! Filoform duct seals have been designed specifically to prevent this.

The Filoform range of duct sealing systems can:
· Protect from floods and dust contamination.
· Prevent the spread of gas through duct systems
· Prevent the spread of fire.
· Prevent the ingress by rodents and insects.
· Be selected very simply.

Selection of the best suited solution can be aided by calling your local sales office. Generally, the seals can be divided thus:

1. Semi-permanent seals (types MDI to MDIV), and

2. Re-openable seals (type Filoseal+)

The types MDI to MDIV are based upon a specifically formulated two component expanding polyurethane resin. The resin is packed in a divided transparent plastic bag with a screw point ready for the pouring nipple. By removing the divider and mixing for 30 seconds, the resin is ready to be poured into your MDI-IV seal system. After pouring, the resin starts to expand by forming CO_2. This expansion of the resin penetrates all areas inside the duct thus sealing any opening regardless of the shape of the duct or bore hole. Once expanded, the resin starts to cure and harden. The two component resin provides not only a 100% water and gas tight seal but also offers excellent mechanical strength.

The type Filoseal+ are based upon our MD+ silicon system. This system is particularly effective when there is a need to re-open the duct for removal or replacement of cables and pipes. The Filoseal+ kit comes with a two density foam filler piece to create a backing for the MD+ and create suitable cable or pipe spacing and retention. Once the foam filler piece is fitted into the duct (typically 20mm in) the one component MD+ silicon system is applied over the top using a standard mastic type skeleton gun. Once fully cured, the thixotropic MD+ forms a plastic elastomer mass with special qualities of sealing and bonding and also being very durable. Re-entry into the system is simple and fast and just requires more MD+ to be applied where it has been removed.

Fire　　　　**Flood**　　　　**Rodents**

FiloSeal+ Re-enterable Duct Sealing System

The Filoform duct sealing system FiloSeal+ uses our MD+ sealant which is easily applied from a skeleton gun. The high quality, one component, flexible sealant "MD+" is based on a silicon compound that cures with air (Humidity).

After application and full curing the thixotropic MD+ forms a plastic elastomer mass with special qualities effectively sealing and bonding, while providing a high level of durability.

FiloSeal+ is very easy to apply regardless of the type of cable scenario in the cable ducts as it uses a uniquely shaped foam piece which positions neatly around the cables or pipes in the duct.

The unique design of the tri-flexible foam makes positioning and separation of the cables very simple while also providing a backing for the MD+ to be applied on. This seal is easily installed in vertical scenarios while providing the added security of insuring no loss of components down the duct.
FiloSeal+ is suitable for sealing several cables or pipes contained in one duct and also allows re-entry of the seal to add or remove cables or pipes as required.

· Flexible, one component, adhesive and sealing compound in a cartridge - (310ml)
· High levels of Gas and Water tightness
· Excellent adhesion
· Shows Fire resistance properties
· Resistant to, Petrol, Diesel, Ethanol, ASTM oil, LPG & Many more.
· Resistant against Water, Alkaline, Chemical agents
· Resistant to Hydrogen Sulphide / Methane and many other Gases (NedLab)
· Non corrosive
· Solvent free
· Shock absorbing
· Non toxic, neutral and almost odourless
· Complies with ATEX regulations
· WIMES Compliant, (3.02 clause 7.4.3.2, d & e)
· Suitable for any shaped duct / bore hole / opening
· Quick and easy installation
· A complete kit for one duct
· Seals all know materials, PVC & PE sheathed cables, PILC, (HD) PE pipes
· Suitable for renovations, can be installed retrospectively
· Over 25 years of operational experience

FiloSeal+ Re-enterable Duct Sealing System

One of the reasons why ducts are sealed is to prevent running water getting into a building or enclosure. Often when faced with sealing a duct, this running water is still evident.

Our Filoseal Running Water Block system provides the user with a method of preventing the water from ruining any permanent sealing system whilst that system is installed. The kit provides a method of damming the water flow, controlling it and stopping it.
Small kit
· Non-hardening plastic waterproofing sealant.(Damming Putty)
· 200mm length 15mm pipe
· 15mm Emergency tap
· Pipe insert to strengthen pipe when tap is fitted

Large kit
· Non-hardening plastic waterproofing sealant.(Damming Putty) x 2
· 200mm length 15mm pipe
· 15mm Emergency tap
· Pipe insert to strengthen pipe when tap is fitted

MDI - Duct sealing system

Duct sealing system MD I has been developed for sealing ducts containing pliable cables such as coax and rubberised cables, which can be easily bent to a right angle.

This system allows these usually vulnerable cables to be sealed anywhere along a wall where the cable enters a building

Suitable for ducts with a diameter of 16mm up to 32mm and cables or pipes with a diameter up to 25mm. All our duct sealing system is specified and used by major Electrical, Gas, & Water Utililty companies in the UK and Benelux countries.

Properties	Unit	Value

MDII - Duct sealing system
Duct sealing system type MDII has been developed to provide an effective and simple solution to all gas- and watertight duct sealing requirements. MDII will not only seal the space between the cable or pipe but also the space between the duct and the wall in one operation.

The MDII system is suitable in situations where more than one cable or pipe is in the duct. The opening of the duct does not need to be completely round.

Seals all known materials: PVC & PE sheeted cables, PILC cables, (HD)PE pipes, PE drinking water conduits.

Due to the design of the divisible conical cap, it is possible to install the system also in existing situations. Installation of the cap can be done by trimming the cap to the desired diameter of the cable or pipe.

MDIII - Duct sealing system

Duct sealing system type MD III is designed for sealing cable and pipe penetrations in conduits or duct openings that are tightly positioned against each other.
The MDIII systems has two circular foam flanges that creates a chamber where our specially formulated expanding polyurethane resin can easily be injected due to the convenient and safe to use twin pack with screw nipple and filling tube. The polyurethane resin will expand and thus create a gas and watertight seal.

MDIV - Duct sealing system

Sealing system type MDIV has been developed to create an effective gas and watertight seal of ducts that have no cables or pipes installed.

The sealing system type MDIV consists of a foam ended hollow clear tube, and a safe to use twin pack containing our specially formulated expanding polyurethane filler.

This polyurethane filler is injected in the centre of the hollow tube, which then the seal needs to be pushed and positioned in the duct / bore hole. The polyurethane filler will expand thus sealing the duct against water and gas.

If the duct needs to be utilised at a later datethen the MDIV can be removed easily by using a sharpe cutting tool. The duct can then be re-sealed by using either of our sealing systems.

The sealing system MDIV can also be used for sealing vertical ducts.

MD+ Fire Resistant sealants for ducts

The effective, and easy to install solution to gas, watertight, and fire proof duct sealing requirements.

Introduction
Filoform duct Sealing systems have been used for decades to provide a gas and watertight sealing. The seals can also be made fire resistant for up to 2 hours by using a special fire resistant sealant.
Firetest at Warrington Fire

Gas- and watertight
Filoform duct sealing systems are based on a specially formulated expanding 2-component polyurethane resin. The resin is packed in a transparent twin pack already prepared for use with a filling nozzle. After removing the separation strip, the 2 components should be thoroughly mixed for 30 seconds. Once the resin is ready for use; the twin pack is easily opened by installing the screw type filling nozzle. Once the resin has been squeezed into the duct it expands due to the formation of CO_2. During this expansion process the resin penetrates into any gaps regardless of the shape, size, number of cables or tubes that is installed. The expanded resin will cure and form a durable gas and watertight seal with excellent mechanical strength.

Fire resistant
Using the special MD+ Fire Resistant Sealant in combination with Filoform/MD-Duct Sealing Systems provides fire resistance up to 2 hours in conformity with the standard EN1366-3:2009*.

Filoform duct sealing systems are easily adjusted to the requirements of any specific situation.

Fire resistance in conformity with the standard EN1366-3:2009 can only be achieved when the duct seal is installed in accordance with our installation instructions. The fire resistance in conformity with the standard EN1366-3:2009 has been tested and approved by Warrington fire.

Benefits
· High levels of gas and water tightness
· Fire resistance up to 2 hours (see page 7 for details)
· Fire resistance tested on various types of cables and piping
· Suitable for use with all shapes, size / diameter of ducts
· Quick & easy installation
· A complete kit for one duct
· Suitable for all cable and pipe materials
· Excellent mechanical strength, (after curing) resistant to movement, shocks and vibrations
· Suitable for renovations, can be installed retrospectively
· Over 25 years of operational experience in the field

Fire resistant up to 2 hours!

Classifications
Filoform had a large number of different penetration configurations tested in accordance with the standard EN1366-3:2009, and had these classified in accordance with the standard EN13501-2: 2007 +A1: 2009. Based on this, the Filoform duct seals, provided installed as described above, have been classified as follows:

Penetration seals with cables:
MDII in combination with MD+ fire resistant sealant: 90 minutes (EI 90, E 90)
MDIII in combination with MD+ fire resistant sealant: 120 minutes (EI 120, E 120)

Penetration seals with steel pipe (for example gas pipe):
MDII & MDIII in combination with MD+ fire resistant sealant: 90 minutes (EI 90-C/U, E 90 C/U)

Seals without cables or pipes:
MDIV in combination with MD+ fire resistant sealant: 120 minutes (EI 120, E 120

MD+ Fire Resistant sealants for ducts

Fire resistant up to 2 hours!

Application

The high quality MD+ Sealant is a fire resistant and flexible one-component product.

This fire resistant sealing compound is based on a silicon combination. After application, the thixotropic compound cures with atmospheric moisture to form a durable seal. MD+ is also suitable to provide a fire resistant finish to the Filoform MD-series duct sealing systems, if applied as follows:
Characteristcs

· Flexible, one-component, adhesive and sealing compound in cartridge (310 ml.)
· Gastight and watertight seal
· Fire resistant
· Tested on various cable- and piping types
· Excellent adhesion
· Good resistance against water, alkaline, chemical agents, oil and greases
· Non corrosive
· Solvent free
· Shock absorbing
· Safe useage; non-toxic, neutral and almost odourless.

Fill & Seal sealing kit 290ml

Filoform Fill & Seal compound is a high quality, flexible and strong one-component product. The Filoform glueing and sealing compound is based on a hybrid MS-polymer.

After application the compound cures with atmospheric moisture to form a durable, high-levelled elastomer.
Applications for Fill & Seal compound are telecom technique, cable ducts, wall ducts, gastight and watertight sealing for centre plugs and duct plugs. Also used as a glueing and sealing compound in construction and shipbuilding industry.

Fibre optic networks / FttX

The demand for faster communication links and higher speeds is increasing rapidly. Throughout the world, existing telecommunication infrastructures are being improved and new FttX networks are being rolled out.

At Filoform, we have over 50 years of expertise in providing underground telecommunication links and gas and watertight duct sealing systems. In the last 15 years we have become a specialist in the development and production of seals for fibre optic networks.

Our unique seals are suitable for both new networks and improving existing infrastructures. Filoform duct seals provide gas and watertight protection. They also provide optimal protection for duct-in-duct and cable-in-duct networks after their installation. Underground fibre optic networks are perfectly protected against the elements, thus contributing to the enhanced longevity and reliability of your investment.

Filoform duct seals for fibre optical networks are well known for their easy and quick installation. All seals have been developed with the thought in mind that they should be suitable for retro fitting. Furthermore, due to their product design our sealing products contribute to a reduction of the labour costs for a FttX project.

The compact design of the seals ensure easy assembly in all situations, even in locations with difficult access, without any special tools.

The technical specifications of the seals meet the technical standards of the industry. I.e. gas&water tightness up to 0,5 bar (depending on configuration) mechanical strength and environmental conditions. All sealing solutions are compatible with ducts and cables from all major manufacturers.
All components are manufactured from high quality raw materials which ensure a long life time. As part of our quality control program, all parts and duct seals are being tested before and after manufacturing process.

Our network of partners / distributors throughout the world guarantees availability of our solutions and technical assistance. Photo practical situations.
MDI FttH Duct sealing system
The Filoform MD1-FttH is designed for gas and watertight sealing of FttH home entries with micro ducts and cables up to Ø10mm. The diameter of the drilled hole needs to be at least Ø16mm wide and max. Ø 20mm.

The sealing cap can be applied to the wall by using the special anchoring pin. This way it is not necessary to drill additional holes and to secure the cap with screws.

A gas and watertight seal is created with use of Filoform expanding PU resin type 2234. The resin package contains the right amount of resin to secure an optimal sealing. After mixing the resin and filling the cap it will start expanding. Within 30 minutes the resin will fully cure intro a stong and durable seal. Any irregularities or damage to wall will be restored with the resin.

To seal the duct opening on the inside of the house, we recommend the use of Filoform Fill & Seal sealing paste.

- Universal, suitable for micro ducts and cables up to Ø10mm
- Expansion along the borehole and on the outer wall guarantees an excellent seal
- Tested 1.0 bar Gas & Watertight
- Quick installation in minutes, no special tools required
- No extensive core drilling necessary
- Also suitable for angled penetrations
- Suitable for sealing of drilled holes in the most common wall types with waterproofing according to DIN 18195 T4
- Complies with DIN 18332 underground cable laying works: cable and conduit entries into buildings are to be made watertight and gastight
- High mechanical strength, resists ground movement, shocks and vibrations
- Supplied as one complete kit for sealing of one house connection
- Over 30 years of practical experience, installed in many Telecom / FO network

Divisible seal for HDPE ducts

Applications

Suitable for gas and watertight sealing of 32, 40, 50 and 63mm HDPE ducts, which contain mini ducts and / or (fibre optic) cables.

The modular system will guarantee easy installation of various different cable and duct configurations. Our system is divisible so can be applied at installation or afterwards.

The rubber inserts can be custom designed for your specific needs and configuration and will contain (temporary) blind plugs to make the system more flexible at the installation site.

Package Contents
· 2 pieces plastic shells
· 2 pieces closing keys
· 1 piece synthetic rubber plug for sealing round the mini tubes
· Illustrated installation instructions

Technical Specifications
Plastic scales: Glassfibre reinforced polyamide
Closing key :   Glassfibre reinforced polyamide
Sealingplug :   TPE
Sealing: up to 0,25 / 0,50 bar (depending on configuration)

DB-bundle break out seal

Applications

Filoform DB bundle breakout seals have been developed to provide an effective and simple solution to all gas and watertight duct sealing requirements.In a 32, 40, 50 and 63mm duct, depending on the type of DB bundle, space is created for spreading the miniducts from the DB bundle. These are sealed by the divisible duct sealing set. Subsequently, a similar seal is made between the DB-bundle and the HDPE duct.

The advantage of this solution is that in many underground closures standard ports for sealing to ducts with a diameter of 32, 40, 50 or 63mm are provided. With this solution, a simple waterproof entry of a DB bundle can be achieved..
Ductseal
HDPE 63 - 24X7 + 1X14mm

Duct 63mm

Ductseal
HDPE 63 - 43,5mm

DB cable - 24X7 + 1X14mm

Package Contents
· 2 pieces plastic shells
· 2 pieces closing keys
· 1 piece synthetic rubber plug for cavity shapes
· 1 pce PE duct, length 200mm
· Illustrated installation instructions

Technical Specifications
Plastic scales: Glassfibre reinforced polyamide
Closing key :   Glassfibre reinforced polyamide
Sealingplug :   TPE
Sealing: Up to 0,50 bar

Item number	Description	Duct outside diameter (mm)	Configuration (qty x mm)	Order unit

Other sizes and configurations available upon request.

Divisible sealing set for subducts

Applications

Filoform divisible duct sealing sets for subducts have been developed to provide an effective and simple solution to all gas and watertight duct sealing requirements. This modular system enables you to instal it easily onto to new and existing installations. Due to the compact design the seals can be installed in all situations, even in locations with difficult access.

Package Contents

· 2 pieces plastic shells with click-mounting
· 1 piece cutting block
· Synthetic rubber seal
· Illustrated installation instructions
· Packaging 25 sets per box

Divisible mini/micro duct seals

Applications

Filoform miniduct seals have been developed to provide a gas and watertight seal between a subduct with anoutside diameter of 4, 5, 6, 7 & 8mm and a optical fibre cable with an outside diameter from 0.9 > 2.5mm.

The miniduct seal is easy to instal on new installations and existing installations. Thanks to the clever design,sliding the rubber seal over the fibre compresses against the duct which gives it a water & gas tight seal. The compact design seal can be installed in all situations, even in locations with difficult access because of its ease of installation.
Package Contents
· 1 transparant housing
· 1 synthetic rubber seal
· Illustrated installation instructions
· Packaging 100 sets per bag

Technical Specifications
Plastic housing: PCTPE
Sealing plug: up to 0,50 bar

Sealing Caps

Filoform sealing caps have been developed to provide an effective and simple solution to all splash water and dirttight sealing requirements in HDPE ducts and protective sleeves.

The sealing caps are standard dirt and splash watertight. After mounting with sealing compoundFiloform Fill & Seal (art.nr. 80840) or Fire & Water-seal (art.nr. 80845) the Filoform sealing plugs easily exceed thespecifications of NEN 2768.

The Filoform sealing caps are made from a high quality TPE, this material has a hardness of 40 Shore A.

Universal HDPE sealing plugs

Filoform sealing plugs have been developed to provide an effective and simple solution to all splash water and dirttight sealing requirements in HDPE ducts, protective sleeves and diamond-drilled ducts.

The sealing plugs are formed from one part, with a seam part. Due to this unique construction, the plug can be usedas blind and sealing plug.

Furthermore, the sealing plug is inside specially shaped. This special shape enables you to adapt the plug easily tothe diameter of the cable or subduct. This enables you to obtain savings in inventory costs since only a very limitednumber of types of plugs are needed.

The Filoform sealing plug is directly applicable in situations where a blind plug temporarily without cable or subductinside the HDPE duct should be sealed or to seal openings for future transit extensions are provided.

To apply the sealing plug, the plug can be adjusted to the correct cable or subduct diameter by shortening the plugusing the size chart on the packaging.

The sealing plugs are standard dirt and splash watertight. After mounting with sealing compoundFiloform Fill & Seal (art.nr. 80840) or Fire & Water-seal (art.nr. 80845) the Filoform sealing plugs easily exceed thespecifications of NEN 2768.

The Filoform sealing plugs are made from a high quality TPE, this material has a hardness of 40 Shore A.

Yellow plugs

Application:

Filoform divisible sealing plugs for ducts have been developed to provide and effective and simple solution to all gas and watertight duct sealing requirements.

This modular system enables you to close it easily onto to new and existing installations. Due to the compact

design the seals can be installed in all situations, even in locations with difficult access.

Package contents:
- 1 Synthetic rubber seal (TPE) plug

Number of openings depending on configuration:
- 1 ABS insert
- Silicone wipe
- Illustrated installation instructions
- Packaging: 1 set per bag

Properties:
- Gas and watertight up to 0.5 bar
- Divisible, no need to push over the ducts/cables
- Quick and easy installation
- High pull out strength
- Versions available for 25, 50 and 54mm ducts

End caps

Applications

Filoform sealing caps are used for sealing and protection of glass fibre tubes against water penetration and dust.

These sealing caps are also used for sealing and protection of vulnerable ends of several products. Filoform sealing caps are made out of very flexible PVC. This enables simple assembly and a perfectseal. The PVC material offers excellent mechanical protection and resists water, oil, grease andacids.

Subject to change without notice.

Characteristics
• Simple assembly
• Perfect sealing and mechanical protection
• Excellent chemical resistance
• High shock absorbing ability
Heat shrink components

Filoform heat shrink components are manufactured from high quality cross linked polyolefin material that offers an exceptional insulation and long term service reliability.

The components are supplied with standard internal hot melt adhesive coating which ensures a permanent seal on irregular cable sheats. The hot melt adhesive starts melting when the appropriate temperature for shrinking is achieved.
All products are compatible with most commonly used cable i.e. SWA, XLPE, PVC, PE or Rubber Sheated Cable. Accessories for paper-insulated cables are available.

After complete installation Filoform heat shrink components provide high mechanical strength and a permanent elasticity combined with excellent resistance to weathering, moisture, contamination and adverse environmental conditions.
The production process is closely monitored in accordance with ISO 9001.

Product range

End caps
Filoforms' extensive range of end caps are used to seal the ends of all types of cables. Internal adhesive coated end caps provide protection from ingress of water/moisture. End caps without hot melt are adhesive available too.

Low voltage break outs
Due to the internal coating, LV break outs provide a strong and permanent water/moisture proof seal to the crutch of 2, 3, 4, 5, 6 and 7 core cables.

Anode caps
For cathode protection.

Medium and heavy wall tubes
A wide range of adhesive coated tubes with optimal shrink ratios, for use in a variety of applications to seal & protect electrical connections, joints & terminations, whilst providing excellent mechanical protection.

Wrap-around sleeves
Adhesive coated heat shrinkable wrap-around sleeves with SS Rail or Rail-less option. Designed for re-jacketing and/or sealing of cables sheets after damage. Available in a variety of sizes & lengths with variants for general use or with reinforced jacket for specialist pressurised telecom applications.

Thin wall tubes
Flexible, flame retardant, heat shrinkable tubing available in a wide range of sizes, colours & shrink ratios' to meet an extensive range of application needs.

Heat-shrink End Caps

Filoform's HE range of heat-shrinkable End Caps offers an economical means of sealing power and control cable ends to ensure a water-tight seal. They are resistant to oxidation, ozone and UV radiation. Their internal surface has a layer of hot-melt adhesive, which retains its flexible properties after recovery.

Heat-shrinkable End Caps are recommended for use both in open air and on underground power distribution cables with PVC, lead or XLPE sheaths, aluminium or steel armoured.

LV Heatshrink Tubing

Thin wall heat shrink tube 2:1 & 3:1 / Black & Green-Yellow

Filoform's H range of thin wall heatshrink tubes is made of cross-linked semi-flex-
ible polyolefin which shrinks uniformly to form a permanent insulating covering.
Upon recovery, thin wall tube will conform to the shape it is applied over. Ideal for
low voltage electrical insulation up to 1000V.

LV Heatshrink Tubing

Medium wall Shrink tube with glue layer 3:1 & 4:1

Filoform's HM range is a cross-linked medium wall heatshrink polyolefin tubing with a shrink ratio 3:1 to 4:1. The medium wall thickness provides a tough and semi-flexible insulation making the product ideal for the protection of underground cable joints, crimped terminal ends and cable terminations. The HMA range has a hot-melt adhesive lining which ensures an environmental seal that prevents the ingress of water.

LV Heatshrink Tubing

Heavy wall shrink tube with adhesive 3:1 & 4:1

Filoform's HTH range is a cross-linked heavy-wall heatshrink polyolefin tubing with a shrink ratio 3:1 to 4:1. The toughness and weatherability of the tubes makes them well-suited for exposed applications for the protection of cable joints. The HTHA range contains hot-melt adhesive coating.

Resins

Filoform is a specialist formulator of polyurethane and epoxy resin systems for low voltage cable jointing and duct sealing solutions. Our resins are used in a variety of applications to protect, bond, seal and insulate low voltage cable connections and duct seals in the networks of utilities throughout Europe.

Our products are developed and manufactured at our modern manufacturing facilities in the Netherlands. Filoforms' R&D engineers have more than 40 years of experience in resin formulating and production.

All resins have excellent insulation resistance in both the liquid and solid phase. This value is also monitored & checked after each production batch.

Constant high quality of the resin packs itself, due to electronically monitored sealing process and intensive quality checking during production. Making the resin packs suitable for use in pressure pumps. High flexibility of the resin packs and the absence of side seals ensure easy kneading of the components. The special divider strip ensures safe separation of the two components, and is easy to open upon usage with no unnecessary burden to the the resin pack. Filoform resins are developed in accordance with HD631-1 S2 and other standards

Our standard range of LV resins:
· Polyurethane resins for both cast resin injection joints and taped resin injection joints
· Epoxy resins for taped resin injection joints
· Removable gel resins re-enterable insulating clear gel designed for the protection of electrical / electronic enclosures
· Flexible flame retardant resins for cast resin joints
· Resins for cabinet base sealing
· Expanding polyurethane resins for duct sealing
· Bonding resins for bonding sensors in concrete or asphalt roads
· Epoxy connector resin for the installation of glass fibre connectors to glass fibre cables

Filofill P2654 Polyurethane casting resin

Filofill P2654 is specially designed for cablejoints up to 1kV. Filofill P2654 had good anti corrosionproperties abd shows a good adhesion to metald, ceramics, and many different plastics, and can be utilized on all plastic- and paper isolated cable-types.

Filofill P2600 polyurethane resin

Specially designed for taped resin injection cablejoints up to 10kV. The resin contains polyether polyols, estherpolyols, and fire retardant additives. The hardner is a high quality MDI type. Filofill P2600 does not contain halogens or plasticizers. Filofill P2600 has good anti-corrosion properties and provides good adhesion to metals, ceramics, many different plastics and can be used on all plastic and paper isolated cable types.

Filogel resin

Re-enterabe insulating clear gel designed for the protection of electrical / electronic enclosures, boxes, terminal blocks, trunking, pipes and mechanicle parts against water, moisture, dirt, dust, and mechanicle shock.

- Potting of electronic components
- Telecommunication applications to avoid damage caused by moisture
- Insulation of low voltage connections
- Resin can be removed very easily
- Free of iso-cyanates, epoxides and silicones
- Non toxic
- Long Shelf life
- Not classified according to the EC regulations
- Medium viscosity while pouring
- Good adhesion to metals, minerals and many plastics
- Excellent hydrophobic behaviour

Item number	Description	Content	Colour	Order unit
804316	Filogel gel resin 1000ml	1000ml	amber transparent	3 pcs/carton
804309	Filogel gel resin 200ml	200ml	amber transparent	10 pcs/carton

Cabinet Base Sealant MV

The Filoform Cabinet Base Sealant is designed for use in LV distribution cabinets, public lighting cabinets, cabinets for traffic control, and outdoor transformer station installations.

The casting resin prevents ingress of pests and weed growth or the penetration of the roots of plants. In addition, a solid floor improves the climate within the stations. This ensures less chance of interference and extends the life of the components.

Item number	Description	Content	Colour	Order unit
804675	Cabinet Base Sealant 2 x 2,5Ltr. MV	5000ml	black	per set

Tapes

Nitto tape 15 self fusing butyl rubber tape

Nitto 15 is a self fusing rubber tape, widely used for electrical insulation, protection, splicing and termination of 6 to 22KV cables.

· Used for termination, splicing & corrosion protection to cables.
· Completly self-amalgimates in two hours.

Item number	Description	Dimensions	Colour	Order unit
80046UK	Self-fusing butylrubbertape 38mm x 10m x 0,50mm	38mm x 10m x 0,50mm	black	50 rollen / carton
800452UK	Self-fusing butylrubbertape 19mm x 5m x 0,75mm	19mm x 5m x 0,75mm	black	100 rollen / carton

Nitto tape 12FB

Nitto 12FB is a self amalgamating putty tape. By strectching and wrapping around pipefittings, cables, or other objects, the putty will instantly amalgamate into itsself, thus creating a waterproof barrier to prevent corrosion. 12 FB is suitable for in and outdoors.

Item number	Description	Dimensions	Colour	Order unit
81070UK	Putty tape type 12FB, 38mm x 1,5m	38mm x 1,5m x 3,0mm	black	10 rollen / carton

Wrap around tape

Liquid tight wrapping of the mesh with tape creates a secure means for injecting the resin into injection joints. For binding of cables and pipes.

Item number	Description	Colour	Order unit
800350.5	Wrap-around tape 25mm x 20m	transparent	96 pcs/carton
80467	Wrap-around tape 38mm x 20m	transparent	60 pcs/carton
80469	Wrap-around tape 50mm x 10m	transparent	80 pcs/carton
80470	Wrap-around tape 50mm x 20m	transparent	48 pcs/carton

Tapes

Glass fibre reinforced tape

· Used as a reinforcement tape for bigger injection joints during the summer to prevent the PVC tape from stretching too much whilst injecting the resin.

· Very suitable for bundling of cables, tubes and profiles

Item number	Description	Dimensions	Colour	Order unit
80153UK	Filamenttape 38mmx 10m	38mm x 10m x 0,13mm	transparent	48 pcs/carton

Sealpass

· Provides an excellent watertight seal
· Adjusts automatically to every shape
· Sealpass is used for protection of pipelines, cables and cable connections
· Very good adhesion on steel, plastics and on uneven surfaces
· Provides corrosion protection

Item number	Description	Dimensions	Colour	Order unit
81203UK	Sealpass 50mm x 10m	50mm x 10m x 2mm	black/brown	per piece

Mastic tape

· Watertight sealing of taped resin injection joints & cast resin joints
· Electrical insulating and moisture sealing applications
· Watertight gasket in glass and steel constructions

Item number	Description	Dimensions	Colour	Order unit
80190UK	Mastic tape 10mm x 160mm	10mm x 160mm x 1mm	black	100 pcs/carton

Nitto 21 PVC tape 100mm x 20m

Nitto tape 21 is a heavy duty general purpose tape which is ideal for wire and cable harnessing, color coding, duct sealing, corrosion preventing, holding and protection.

Item number	Description	Dimensions	Colour	Order unit
800700.1UK	Nitto tape 21, 100mm x 10m black	100mm x 10m x 0,19mm	black	40 pcs/carton

Nitto tape 51

Anticorrision Tape No. 51 has been developed for prevention of corrosion to various types of pipeslines, power & communication cables.

· Offers superior durability and corrosion resistance
· Consists of a flexible film and thick adhesive
· Adheres well to joints and curved objects
· Provides excellent sealing and cushioning

Item number	Description	Dimensions	Colour	Order unit
81050UK	Nitto tape 51, 38mm x 10m	38mm x 10m x 0,4mm	black	100 rollen / carton

Nitto Tapes

Nitto tape 225

Nitto tape 225 is a high grade flame retardant electrical insulating tape.

Item number	Description	Dimensions	Colour	Order unit
800102.1UK	Nitto tape 225, 19mm x 20m	19mm x 20m x 0,19mm	black	120 pcs/carton

Nitto tape Hyperflash 695

Filoform Hyper Flash No.695 is a combination of deformable rubber substrate, butyl rubber adhesive, and release paper. It fits tightly around irregular shapes like sewage pipes and corner joints to shut out water and air.

Item number	Description	Dimensions	Colour	Order unit
800485UK	Hyperflash 6951A, 75mm x 5m	75mm x 5m x 1,3mm	black	18 pcs/carton
Tools

Injection Pump 710ml

Filoform injection pumps are used to pump the resin under pressure (±2 Bar) into injection joints. The injection pump has a continuously variable piston displacement enabling an optimal flow of the resin into the joint. The injection pump type 710ml has a larger capacity than the injection pump type CN-E4 (355ml) and is therefore suitable for all resin bags to 710ml.

- Suitable for resin packs A, B, C & D

Item number	Description	Order unit
80396UK	Injection gun GN-E4 with ball bearing mechanism	per piece
80800UK	Luborsil silicon spray 500ml	12 pcs/carton

Injection Pump GN-E4

Filoform injection pumps are used to pump the resin under pressure (±2 Bar) into injection joints. The injection pump has a continuously variable piston displacement enabling an optimal flow of the resin into the joint. The ball bearing mechanism reduces the manual effort required to fill the joint.

- Suitable for resin packs A, B & C

Item number	Description	Order unit
80800UK	Luborsil silicon spray 500ml	12 pcs/carton
80394KUK	Injection gun GN-E4 with ball bearing mechanism	per piece

Hot air gun

· For installing heat shrink components
· Suitable for use under adverse weather conditions and in confined spaces

Item number	Description	Order unit
86010UK	Gas Cartridge	12 pcs/carton
86000UK	Hot air gun with cartridge	per piece
