Special DEP Earth with Reflect Aluflex

The PENTA P&B Reflect DEP earth is specially designed for use within the rail industry. Its reflective properties allow operators and authorised personnel to easily locate the position and check proper fitting of the earth at night, whilst the orange appearance ensures the purpose of the lead is clearly identified.

S9B Reflect Kit

PENTA P&B Reflect cable is a revolutionary new product which allows for quick identification due to its orange band. The reflective band aids location and checking of earths on site at night. The clear outer sheath allows inspection of the fine aluminium strands unlike traditional orange Aluflex leads.

Your life,
Our work.

Reflect Kit *from*

For a life on the line.

Built on a history of over 80 years, PENTA P&B is a market leader in the design and manufacture of a comprehensive range of Portable Earthing Equipment. This is used to provide short circuit protection and to control induced voltages and associated currents within substations, on overhead transmission and distribution lines and within the electrified rail network. PENTA P&B also manufacture a range of protection, monitoring and indicating instruments.

Manufacturing Excellence.

Based in Corsham, UK, PENTA P&B manufactures its large range on modern CNC machining systems from high quality materials. Assembly and finishing is carried out by trained operatives in compliance with the highest standards. Stock holding capabilities means that our lead times can work around our customers' needs.

Design Expertise.

As trusted suppliers to the electricity supply industry for many decades, PENTA P&B often design bespoke solutions for our customers. Using cutting edge technology and highly experienced engineers, PENTA P&B pride ourselves on innovation.
